

WIRELESS INTEGRATION

The AXC-2001 Bluetooth adapter wirelessly connects AXS data to Teletrac Navman's VT102. It pairs with the AXS unit flashes when sending data. Installation may require temporary dash removal to access the VT102 or VT202.

WIRED INTEGRATION

Wired integration with Teletrac Navman's VT102 uses four AXS cables. The in-dash VT102 connects via a 10-pin cable (AXC-1008). A splitter (AXC-1002) merges this with a power cable (AXC-1001) wired to 7–32 VDC ignition. A 6m extension (AXC-1004) runs to the external AXS unit.

VT102 Cable	AXS Cable	Description
White	Blue	RS232 VT102 TX (AXS RX)
Green	White	RS232 VT102 RX (AXS TX)
Black	Black	Ground
