

WIRELESS INTEGRATION

The AXS Series On-board Mass Scales connect directly via Bluetooth to the Webfleet LINK 740, enabling seamless communication between the vehicle's OBM system and telematics platform. Once paired, the AXS transmits real-time mass data directly to Webfleet, allowing operators to monitor vehicle weights, payload, and compliance remotely.

Pair your device

1. Download and install the Webfleet installer app. Log in using your webfleet credentials.
2. Enter the Link 740 serial number or scan its QR code, to connect to the webfleet device.
3. Select the SmartOBM Tab.
4. Enter the serial number on the SmartOBM device. A confirmation will appear when the pairing is successful.

Validate the Connection Status

5. To validate the connection status, tap the 3 dots in the bottom right corner and navigate to **diagnostics**
6. Select “**Start Link Diagnostics**”. This may take a couple of minutes.
7. Once completed, confirm the data matches your OBM device.
