

WIRELESS INTEGRATION

The AXC-2001 Bluetooth adapter wirelessly sends AXS data to the MTData unit via a DB9 cable (AXC-1007-F). It flashes during data transmission. Installation may require temporary dash removal.

WIRED INTEGRATION

Wired integration with MTData uses four AXS cables. The in-dash MTData unit connects via a DB9 cable (AXC-1003-F). A splitter (AXC-1002) merges this with a power cable (AXC-1001) wired to 7–32 VDC. A 6m extension (AXC-1004) runs to the external AXS unit.
